🐳 Docker Installation Script (Bash)

This repository contains a simple and automated Bash script to install Docker on Linux systems. The script updates the system, installs required dependencies, adds Docker’s official repository, and installs the latest stable version of Docker.

📌 FEATURES

- ✔ Automated Docker installation
- ✔ Installs latest stable Docker version
- ✔ Configures Docker repository
- ✔ Enables and starts Docker service
- ✔ Optional: Adds current user to docker group

```
#!/bin/bash

sudo apt remove $(dpkg --get-selections docker.io docker-compose docker-compose-v2 docker-doc podman-docker containerd runc | cut -f1)
# Add Docker's official GPG key:
sudo apt update
sudo apt install ca-certificates curl
sudo install -m 0755 -d /etc/apt/keyrings
sudo curl -fsSL https://download.docker.com/linux/ubuntu/gpg -o /etc/apt/keyrings/docker.asc
sudo chmod a+r /etc/apt/keyrings/docker.asc

# Add the repository to Apt sources:
sudo tee /etc/apt/sources.list.d/docker.sources <<EOF
Types: deb
URIs: https://download.docker.com/linux/ubuntu
Suites: $(. /etc/os-release && echo "${UBUNTU_CODENAME:-$VERSION_CODENAME}")
Components: stable
Signed-By: /etc/apt/keyrings/docker.asc
EOF

sudo apt update

sudo apt install docker-ce docker-ce-cli containerd.io docker-buildx-plugin docker-compose-plugin

sudo systemctl status docker

Press Ctrl+ C

sudo systemctl start docker
sudo docker run hello-world
```
